## **RESTRICTION**

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1-22, drawn to a current control circuit, classified in class 327, subclass 538.
- II. Claims 23-24, drawn to an amplifier circuit, classified in Class 327, subclass 560.
- III. Claim 25, drawn to a compensation circuit, classified in Class 327, subclass 307.

Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the inventions are difference because the invention I relates to the circuit for controlling an input current while the invention II relates to a cascaded amplifier and the invention III relates to the circuit for compensating input offset of an amplifier.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
